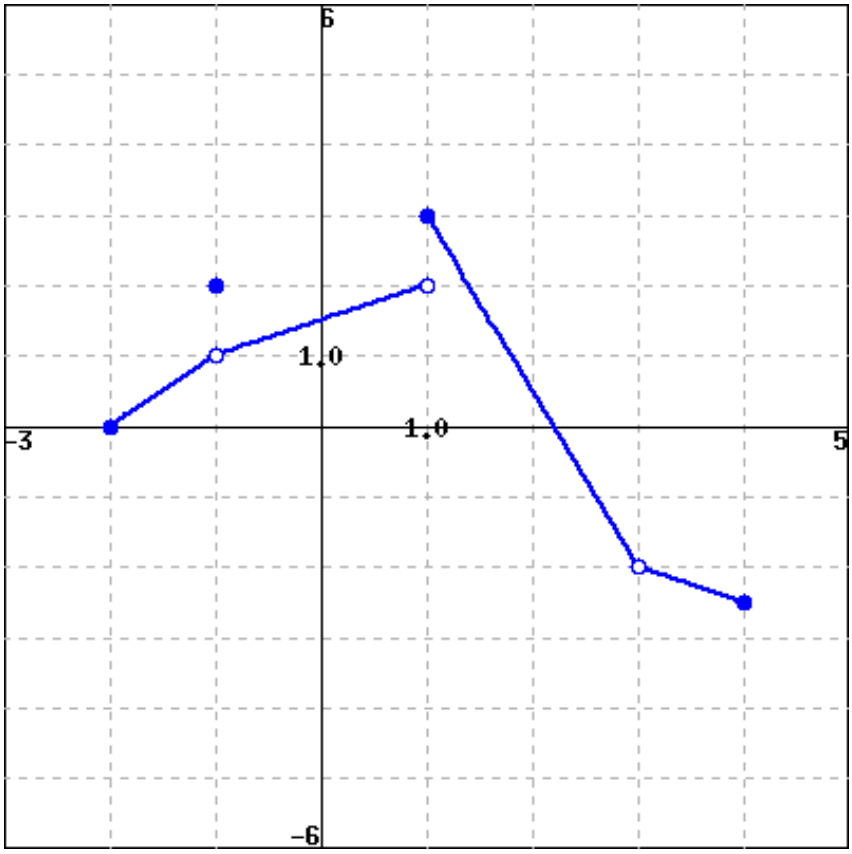
September 28, 2006 **Name** _____

The problems count as marked. The total number of points available is 146. Throughout this test, **show your work.**

1. (27 points) Consider the function F whose graph is given below. Evaluate each of the following expressions. Use 'DNE' if the limit does not exist.



(a) $\lim_{x \to -1^-} F(x)$

(b) $\lim_{x \to -1^+} F(x)$

(c) $\lim_{x \to -1} F(x)$

(d) $F(-1)$

(e) $\lim_{x \to 1^-} F(x)$

(f) $\lim_{x \to 1^+} F(x)$

(g) $\lim_{x \to 1} F(x)$

(h) $\lim_{x \to 3} F(x)$

(i) $F(3)$

2. (5 points) Evaluate the limit

$$\lim_{x\to -2} \frac{x+2}{x^2-3x-10}$$

3. (5 points) Evaluate the limit

$$\lim_{x\to 1} \frac{x^4-x^2}{x^2-1}$$

4. (5 points) Evaluate the limit

$$\lim_{x\to 1} \frac{\frac{1}{x}-\frac{1}{1}}{x-1}$$

5. (18 points)

$$f(x) = \begin{cases} 13 & \text{if } x > 8 \\ 10 & \text{if } x = 8 \\ -x+13 & \text{if } 0 \le x < 8 \\ 13 & \text{if } x < 0 \end{cases}$$

Sketch the graph of this function and find following limits if they exist (if not, enter DNE).

(a) $\lim_{x\to 8^-} f(x)$

(b) $\lim_{x\to 8^+} f(x)$

(c) $\lim_{x\to 8} f(x)$

(d) $\lim_{x\to 0^-} f(x)$

(e) $\lim_{x\to 0^+} f(x)$

(f) $\lim_{x\to 0} f(x)$

6. (16 points) Consider the function whose properties are displayed.

a	-1	0	1	2	3	4
$\lim_{x\to a^-} f(x)$	DNE	1	1	4	2	3
$\lim_{x\to a^+} f(x)$	1	2	1	3	2	DNE
$f(a)$	1	2	-1	1	2	3
$\lim_{x\to a^-} g(x)$	4	1	3	3	1	0
$\lim_{x\to a^+} g(x)$	1	2	0	3	1	DNE
$g(a)$	1	-1	3	3	DNE	0

Using the table above calculate the limits below. Enter 'DNE' if the limit doesn't exist OR if limit can't be determined from the information given.

(a) $\lim_{x\to 3}[f(x)+g(x)]$

(b) $f(1)g(1)$

(c) Find all points (in the table) at which g is continuous.

(d) Find all points (in the table) at which f is continuous.

7. (10 points) Intermediate Value Theorem. Recall that the IVT asserts the following: If f is a continuous function on the interval $[a,b]$ and M is a number between $f(a)$ and $f(b)$, then there exists a number c satisfying $a \le c \le b$ and $f(c) = M$. For this problem let $f(x) = \sqrt{4x-3}$ and let $[a,b] = [1,7]$. Finally, suppose $M = 2$. Find the number c whose existence is guaranteed by IVT.

8. (8 points) Evaluate the limit

$$\lim_{x\to\infty} \frac{\sqrt{4x^2-3}}{11-10x}$$

9. (6 points) Compute the exact value of $|8\pi - 20\sqrt{2}| + |8\pi - 25| - |6\sqrt{2} - 10|$. No points for a decimal approximation.

10. (15 points) Suppose

$$f(x) = \begin{cases} x-3 & \text{if } x < 1 \\ 2x+2 & \text{if } x > 1 \end{cases}$$

and $g(x) = x^2 + 5$. Find the two composite functions

(a) $f \circ g(x)$

(b) $g \circ f(x)$

11. (6 points) Find the (implied) domain of

$$f(x) = \frac{\sqrt{x-2}}{x^2-9},$$

and write your answer in interval notation.

12. (15 points) Let $f(x) = \sqrt{2x+1}$.

(a) Find the slope of the line joining the points $(4, 3)$ and $(x, f(x))$, where $x \neq 4$.

(b) Compute $f(a+h), f(a)$, and finally $\frac{f(a+h)-f(a)}{h}$.

(c) Replace the a with 4 and take the limit as h approaches 0. You have just found $f'(4)$.

(d) Use the information found in (c) to write an equation for the line tangent to the graph of f at the point $(4, 3)$.

13. Bonus problem. (10 points) How many points in the plane satisfy both

a. $|x| = 4$ and

b. $x^2 - 2x + y^2 - 14y = -25$.
