Dr. Lo – Single-Case Research – Transcript

Hi my name's Ya-Yu Lo. Welcome to Research 7113 Single-Case Research. In this class we will be learning about single subject research methods that will allow you as teachers to systematically collect data and evaluate students' performance to see if your instruction or intervention is responsible for students' behavior or performance changes.

You will showcase your learning through developing a single subject research proposal by identifying a problem, coming up with a solution using literature support, and develop a measurement system that will allow you to evaluate or assess students' performance to see if your intervention is effective.

This class will be delivered through Centra. Each of us will be using a headset and microphone so that we can interact and discuss with each other in real time. We will also use Blackboard to supplement and display course materials and resources and other important information for this class.

When you're in Blackboard be sure to browse through the Centra and Blackboard tutorial and get familiar with them. Also be sure to look into the course content page; thst's where you will find all the course notes and materials you will need for this class.

Finally, and probably most importantly, be sure to contact me if you encounter any difficulties or questions at any time so that I can provide support to help you complete this class successfully. So let's get ready and have a productive and wonderful semester. And, I look forward to having you in this class.
