

## M16C/62

### Using the M16C/62 Timer in Pulse Output Mode

#### 1.0 Abstract

The following article describes how to use the M16C/62 timers A's as square wave generators (Pulse Output Mode).

#### 2.0 Introduction

The M16C/62 is a 16-bit MCU, based on the M16C CPU core, with features including 10-bit A/D, D/A, UARTS, timers, DMA, etc., and up to 256k bytes of user flash. The MCU has 5 timer A's, and Pulse Output Mode is an additional feature of timer A's Timer Mode. All 5 timer A's can operate in Pulse Output Mode.

Timer A has the following additional modes of operation:

- Timer Mode (without Pulse Output)
- Event Counter Mode
- PWM Mode
- One-Shot Mode

Figure 1 illustrates the operation of timer A. The remainder of this article will focus on setting up timer A0 in Pulse Output Mode.

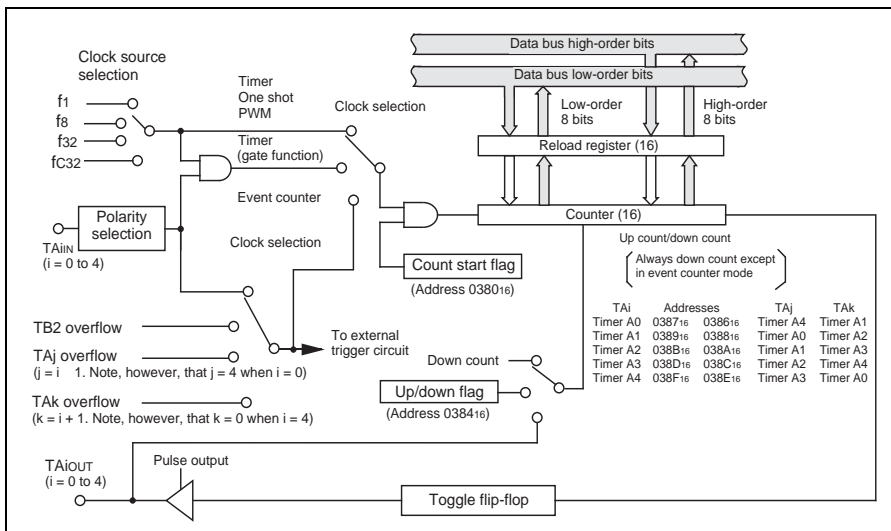

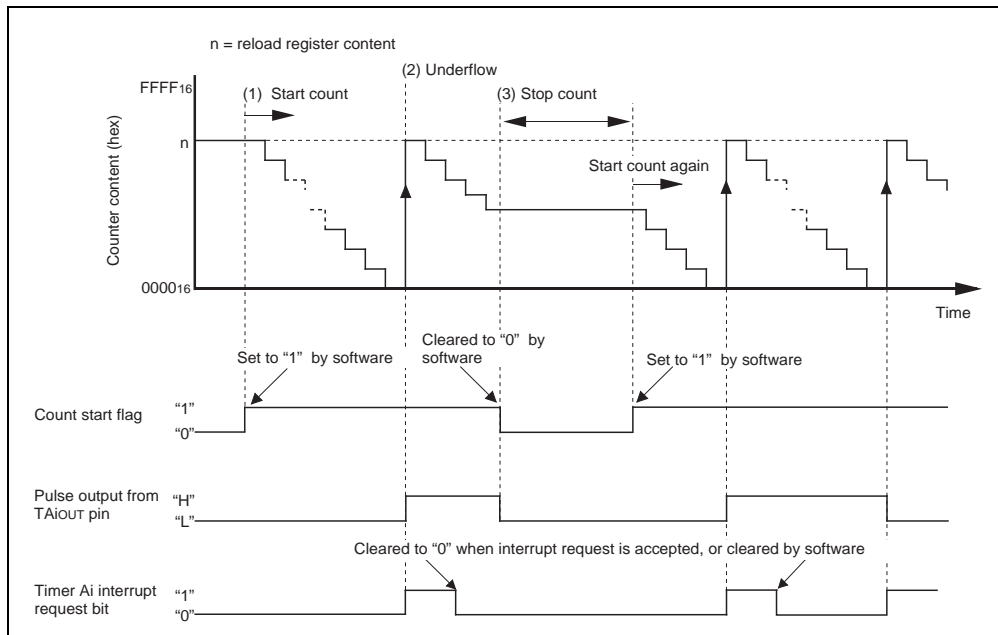

Figure 1 Block Diagram of Timer A

### 3.0 Pulse Output Mode Description

In Pulse Output Mode, the counter register counts down using the selected clock source until the counter underflows (0000 to FFFFh). At this point, the TAIout pin toggles and the contents of the reload register are loaded back into the TAI register and the interrupt request bit is set. An interrupt will be accepted when all of the following conditions are met:

- interrupt enable flag (I flag) = "1"
- interrupt request bit = "1"
- interrupt priority level > IPL (Processor Interrupt Priority Level)

Note that the pulse output is free running and interrupts need not be enabled or serviced. If at any time during countdown the count start flag is cleared, the TAIout pin outputs an "L" and the count is suspended until the count start flag is set. Figure 2 illustrates this.

**Figure 2 Operation Timing of Timer Mode, Pulse Output Function Selected**

### 4.0 Configuring Pulse Output Mode

To configure a timer for Pulse Output Mode:

1. Load the Timer Ai register, TAI (which also loads the reload register) with the count source.
2. Load the Timer Ai Mode register, TAIMR:
  - Select timer mode: bits TMOD0, TMOD1 = 0.
  - Select pulse out: MR0 bit = 1.
  - Select the clock source (f1, f/8, f/32, or fc/32): bits TCK0, TCK1.
3. Load the Timer Interrupt Control register (TAiC) with an interrupt priority level (ILVL), value of at least 1 if interrupts are required.
4. Ensure interrupts are enabled ( I flag set).
5. Set the 'start count' flag bit, TAI<sub>S</sub>, in the Count Start Flag register, TABSR.

It is not necessary to perform these steps in the order listed, but the count register should be loaded before the 'start count' flag is set. Also, the priority level should not be modified when there is a possibility of an interrupt occurring.

The required registers are shown in Figure 3 through Figure 6.

Timer Ai register (Note)	Symbol	Address	When reset
	TA0	0387 <sub>16</sub> , 0386 <sub>16</sub>	Indeterminate
	TA1	0389 <sub>16</sub> , 0388 <sub>16</sub>	Indeterminate
	TA2	038B <sub>16</sub> , 038A <sub>16</sub>	Indeterminate
	TA3	038D <sub>16</sub> , 038C <sub>16</sub>	Indeterminate
	TA4	038F <sub>16</sub> , 038E <sub>16</sub>	Indeterminate

Function	Values that can be set	R	W
<ul style="list-style-type: none"> <li>• Timer mode Counts an internal count source</li> </ul>	0000 <sub>16</sub> to FFFF <sub>16</sub>	O	O
<ul style="list-style-type: none"> <li>• Event counter mode Counts pulses from an external source or timer overflow</li> </ul>	0000 <sub>16</sub> to FFFF <sub>16</sub>	O	O
<ul style="list-style-type: none"> <li>• One-shot timer mode Counts a one-shot width</li> </ul>	0000 <sub>16</sub> to FFFF <sub>16</sub>	X	O
<ul style="list-style-type: none"> <li>• Pulse width modulation mode (16-bit PWM) Functions as a 16-bit pulse width modulator</li> </ul>	0000 <sub>16</sub> to FFFF <sub>16</sub>	X	O
<ul style="list-style-type: none"> <li>• Pulse width modulation mode (8-bit PWM) timer low-order address functions as an 8-bit prescaler and high-order address functions as an 8-bit pulse width modulator</li> </ul>	00 <sub>16</sub> to FE <sub>16</sub> (Both high-order and low-order addresses)	X	O

Note: Read and write data in 16-bit units

## 7.0 Software Code

Following is a simple program written for Renesas' NC30 compiler to illustrate how to set up Pulse Output Mode on timer A0. This program runs on the MSV1632/62 Starter Kit Board and generates a 200Hz square wave on P7.0. A scope can be connected to pin 4 of JP3 to view the waveform. Be sure to remove IC4 (if installed) or the jumper across pins 3 and 4 at JP3 before running the program.

Note that when you stop the program (under KD30), the square wave output does not stop until the system is reset.

To become familiar with the timer, try changing the output frequency, the clock source, or even switch to a different timer (e.g. TA1, etc.).

```

## Keep safety first in your circuit designs!

- Renesas Technology Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

## Notes regarding these materials

- These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corporation product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corporation or a third party.
- Renesas Technology Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
- All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corporation or an authorized Renesas Technology Corporation product distributor for the latest product information before purchasing a product listed herein.  
The information described here may contain technical inaccuracies or typographical errors.  
Renesas Technology Corporation assumes no responsibility for any damage, liability, or other loss arising from these inaccuracies or errors.  
Please also pay attention to information published by Renesas Technology Corporation by various means, including the Renesas Technology Corporation Semiconductor home page (<http://www.renesas.com>).
- When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
- Renesas Technology Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corporation or an authorized Renesas Technology Corporation product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
- The prior written approval of Renesas Technology Corporation is necessary to reprint or reproduce in whole or in part these materials.
- If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.  
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
- Please contact Renesas Technology Corporation for further details on these materials or the products contained therein.
