

Assignment 11

Oral questions

1. Assume $a, b, c \in \mathbb{R}$ satisfy $a^2 + bc = 1$, and let $T : \mathbb{C} \rightarrow \mathbb{C}$ be given by

$$T(z) = \frac{a\bar{z} + b}{c\bar{z} - a}.$$

Show that $T(T(z)) = z$ for all z . (All reflections of the Poincaré upper half plane model are represented by such a function.)

2. All hyperbolic rotations fixing the point i in the Poincaré upper half plane model are fractional linear transformations $z \mapsto \frac{az+b}{cz+d}$ sending i into i . Using this fact, and assuming that we have scaled our coefficients to satisfy $ad - bc = 1$, show that

$$\begin{pmatrix} a & b \\ c & d \end{pmatrix} = \begin{pmatrix} \cos(\theta) & -\sin(\theta) \\ \sin(\theta) & \cos(\theta) \end{pmatrix}$$

for some angle θ .

Question to be answered in writing

1. Find the Poincaré distance between the points $P = 3 + i$ and $Q = (6 + \sqrt{2})/2 + \sqrt{2}/2 \cdot i$ (in the Poincaré upper half plane model).
