Assembly

One of the many advantages of using our product is for the easy assembly and the limited parts needed. Our Water Skimmer only consist of four major components. The assembly of the skimmer takes only 10 minutes to assemble. For a quick and easy use. The parts consist of the; Container (Fig.1), Basket (Fig.2), Y-connector (Fig. 3), Cap (Fig.4).
Directions for Use

1. Remove The Water Skimmer® from packaging.
2. Verify all 4 parts; basket, container, connector, and cap, are present and undamaged.
3. Locate the notched out “L” on the inside of one end of the connector and the small notch on the outside of the container. Slide the connector onto the container and twist to lock.
4. Locate the notched out “L” on the outside of one end of the connector and the small notch on the inside of the cap. Slide the cap onto the connector and twist to lock.
5. Insert a single 3” tablet or a few 1” chlorine tablets into the container. Tablets should sit nicely on perforated plate at the bottom of the container.
6. Insert the basket into the container.
7. Connect vacuum hose to the open end of the connector.
8. Place assembled product into pool and turn on vacuum.
Maintenance

The Water Skimmer company has strived to make a pool cleaner that is easily assembled but also easily maintained over the course of its use. To maintain the Water skimmer there are two different steps to maintain peak performance. For keeping the leaves from backing up the system and harming your pool vacuum. We encourage you to clean the skimmer basket every two to three weeks. The second step in maintaining the performance of your pool skimmer is to regularly check the chlorine tablet and to change the tablet when suggest from the company. This will ensure top performance from your water skimmer.

The water skimmer/chlorinator itself does not have any motorized parts. The vacuum that is connect to our product is motorized which can be harmful. To help maintain this product do not stick anything in the skimmer that could jam or tear the skimmer in the process.

Since the Skimmer is made with plastic the cleaning process is very simple. Most any cleaning product will do and will not be harmful to the integrity of the product. The skimmer should be cleaned every three to four months.

Directions for Maintenance

1. Grab handle on basket and lift up.
2. Dispose of the waste in the basket away from pool in appropriate location (trash can, compost pile, etc.)
3. Verify that there are chlorine tablets in the bottom of the container.
4. Add tablets if needs by following #5 in Directions for Use above.
5. Place the basket back in the proper position inside of the container.
