

# Contextualization, formulaicity, and situation-bound routines in Alzheimer Talk

Boyd Davis and Margaret Maclagan

bdavis@email.uncc.edu margaret.maclagan@canterbury.ed.nz

## Overview: we identify

- the extent to which formulaic sequences and SBU are associated with
- short (less than 1 sec) and long pauses (2+ sec), and are
- collocated with discourse markers and similar contextualization cues.

**Purpose:** examining metaphor, MWE, and formulaic language lets us see

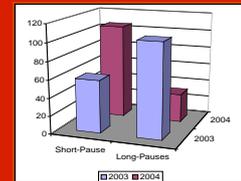

1. ways that their use seems to be essential to human communication
2. how older speakers retain and manipulate figurative and formulaic language from key periods in their lives
3. what the hearer sometimes has to do in order to interpret formulaic language

## Methodology: we analyze

- two conversational narratives in two successive years,
- from each of two 90-year-old women, one from NZ and one from NC. Each woman has moderate impairment from Alzheimer's Disease (DAT).

## Joan

Pauses, planning and timing

Total words show slight decrease  
5231 (2003) 5065 (2004)

## Coding

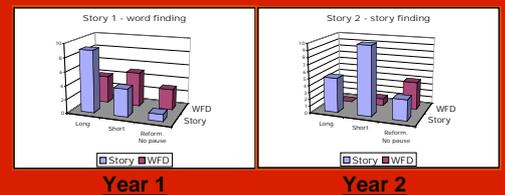

Item	Text	Code
(Continuation)	but we slept I we slept at night	
Formulaic	the school was in (a) a secluded place < yup > I suppose this is what mother thought I and we went home after school and had the night < yup > sleeping	Formulaic
Word finding	and with the fresh air from the sea	
Formulaic	I apart from that we went every school	Formulaic
Formulaic	the holidays term	Formulaic
Formulaic	I and Christmas holidays and just an wild really	Formulaic
Formulaic	out of the park across the road and the steeped onto the beach < oh yes > and we were just a little walk down to the beach < yes yes > and we were all good swimmers we'd learnt to swim at school < of course > we were all good swimmers	Formulaic
New story	I and I remember down at the end of the beach we used to call it the baths < yes >	Formulaic
Word finding-circumlocution	I used to think I think that probably they had in the earlier days some baths that were good for people to come and I lie in < oh right > I don't know < yes yes yes > ah whether they were hot < yes > maybe they might've might've heated them I don't know < yup >	SBR
Word finding-circumlocution	there was also the ah reception area where the	Formulaic
Word finding	I the boats come in to not to park what are you call no anchor < no moor to anchor >	SBR

## Tracking story with DAT speakers

- We use every verbal clue we can find for landmarks, pathways and signposts, such as
  - Intonation for emphasis and for referentiality
  - Discourse markers
  - Repetition of words, phrases, themes, motifs
  - Formulaic phrases and SBUs
- Pauses may be one of the few remaining verbal clues

## What hearers need to bring

- We don't always know the context for a metaphor or a formula or a multiword expression that somebody uses in conversational stories
- Sometimes we need help from prosody, pauses, and SBUs to spot what Bamberg calls the 'small stories,' and to track the larger ones

## Joan's pauses

- In moving from early to moderate dementia, pauses shift function from word-finding to story-finding.
- Timing gives way to planning at story-level

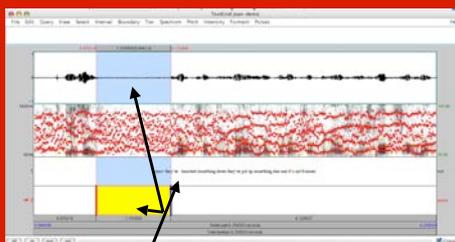

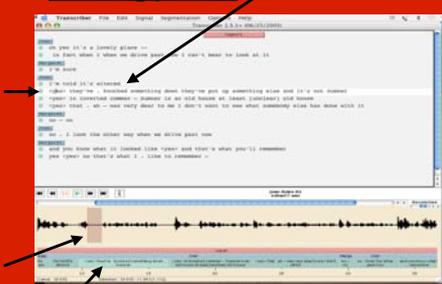

## Glory

Planning and pausing

Glory Mason, 2002

GM: I know where my husband is, I think he's way off somewhere I forgot what the name of the place is (New story) when I was at home, I attended Fountain Hill Methodist Church And they washed each other's feet they didn't really wash them they'd pick up water in their hands and they'd pour it on the feet and uh we attended that some, too my grandparents, they belonged to that church. (New story) it seemed like they did have, I about forgot how it was, they might did have a foot washing in the summer time and have a dinner out on the ground.

## Tracking pauses: Transcriber

Highlighted pause 1.157sec

## Pausing: Hayes et al, 2005

- Does not occur only at syntactic boundaries (Pinker 2005)
- Two kinds of pauses (Ferreira (1993) :
  - "timing based pauses" based on preceding material – due to prosody
  - "planning based pauses" due to upcoming material – due to syntax
- We think it is due to discourse

## Formulaic utterances and SBUs

- a sequence, continuous or discontinuous, of words or other meaning elements, which is, or appears to be, prefabricated:
- that is, stored and retrieved whole from memory at the time of use, rather than being subject to generation or analysis by the language grammar
- SBUs 'are usually based on conceptual metaphors or conventional implicatures. Their meanings are motivated and not arbitrary

Wray & Perkins (2002)

## Conclusion

- Our focus on pauses clarifies their role as a signal that the speaker is trying to locate position or element within a story
  - Their function in narration usually identifies a key detail in a complication or an evaluation
  - As cognitive impairment increases, the pausing changes to signal difficulty in retrieval of narrative components
